

## **Morocco, Waste Management**

CSD Ingénieurs Conseils SA is one of the leading Swiss engineering companies specialized in the fields of waste-management, protective construction, geological investigations, water extraction and purification. Together with the Moroccan D&CRB S.A.R.L. they founded a joint venture, Société CSD-CRB S.A.R.L., in order to implement a waste management project in Oujda, Morocco. The aim of the project is to build and maintain a waste disposal site for refuse from the city of Oujda. They will also invest in an electricity plant, powered by the bio-gas generated from the waste.

This project will have a positive impact on the natural environment of Oujda, as valuable know-how regarding recycling will be transferred to the region. Furthermore, twenty workplaces will be created.

With the credit received from the SECO Start-up Fund, the project sponsors financed construction work, materials and equipment.
