

Bosnia-Herzegovina – Wood Processing

Since 2007 the company produces wood lamella mainly from beech and oak trees for parquet flooring.

The company is planning to increase its production volumes in order to achieve continuous deliveries to its clients in Western Europe, the parquet flooring manufactures. With the project the company increases the capacity of the factory and secures its operating stability.

The SSF loan enabled the investor to increase purchases of beech and oak trees as well as to acquire further equipment for the processing activities.
